

Key parameters impacted

Livelihood zones	Key parameter	Baseline	March analysis result	Variation
CI02 : Nord coton	Own crops sold	953,689	491,680	-48%
anacarde et gros ruminants	Ag. labour	31,751	28,750	-9%

Household and Seasonal Impacts

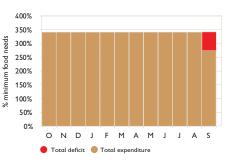

District: OUANGOLODOUGOU

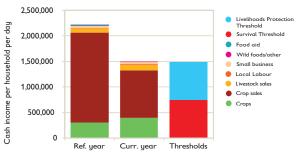

Livelihood Zone: CIV02

Seasonal Expenditure (Food and cash)

Total Income (Food and cash)

Livelihood Zones

What is **HEA**

- Household Economy Analysis is a livelihoodsbased framework for analyzing the way people obtain access to the things they need to survive and prosper.
- HEA consists of a baseline profile of household economics, complemented by Outcome Analyses that measure the impacts of different shocks on those household economics.
- The impacts are measured in relation to how households can acquire the food and cash they need to meet a Survival Deficit* or Livelihoods Protection threshold^{36k}.
- * Survival deficit: minimum cost to access 2100 kcals in food and costs associated with the preparation and consumption of that food, along with water needs. Households below this threshold need humanitarian assistance to survive.
- Livelihoods protection threshold: income required to sustain current livelihoods activities and access to basic services. Households below this threshold have eroded resilience and need assistance to protect livelihoods.
